

# GALLOWAY GROUP

Galloway Group Ltd is a manufacturing and contracting company with around 300 employees and an annual turnover of £27M.

Our Head Office and main factory are in Dundee with 150 people based there. We have a second factory with offices in Dewsbury, Yorkshire where a further 80 are employed. The remainder of our employees generally work out on construction sites throughout the UK.

We manufacture and install ventilation ductwork for new

buildings such as hospitals, schools, office blocks, hotels, football stadiums and shopping centres. Ductwork circulates air around a building. Fire duct can also play a vital part in stopping or slowing down the spread of fire in large buildings.

Much of the mechanical equipment involved in moving air around a building can be very noisy. Our Acoustics division design and manufacture a range of products to keep this noise and vibration to a minimum.

We also fabricate all kinds of metal work including components for the offshore industry and have an Electrical house wiring division

who work with major housing developers.

Our products are sold throughout the world and we work on construction sites throughout the UK.

We have many employees who have worked for the company for over 20 years, some have only ever worked for Galloway Group.

We can and do offer a wide variety of employment opportunities and pride ourselves on the quality of training we provide.

We have three directors in Dundee – **all** started with the company as trainees!

We take pride in our Quality Management and Health & Safety Systems.

## Some buildings we have worked on. Recognise Any?

## Galloway Group Ltd employ:

### Mechanical Engineers

We have over 150 machines in our factories including overhead cranes. All machines need to be kept running so that we can produce our goods. There is a programme of planned maintenance in place and we need to ensure that parts are available at all times. The job is primarily based in the factory and is very varied and challenging, but also very rewarding.

Qualifications in Maths, Technical Studies and practical subjects would be helpful.

### We also employ:

- Paint Sprayers
- Sheet Metal Workers
- Workshop Foremen
- Welders
- Assemblers
- Press Operators/Setters
- Ductwork Installers
- Electricians
- Draughtsmen
- CAD Operators
- Estimators
- Surveyors
- Administration & Clerical Staff
- Accountants & Buyers
- Marketing Staff
- IT Staff

### Acoustics Engineers

The potential careers for an Acoustics Engineer are extremely varied and can cover a multitude of noise and vibration roles such as, laboratory testing of cars, generators etc, external field survey analysis and the designing of theatres and other noise sensitive areas.

Often people who specialise in this area have an interest in music and its technology but this is not essential and it is often more important to have good engineering skills which can be utilised when looking at potential acoustic solutions and designs for reducing noise and vibration creation and transference from the source i.e. noisy generator.

Ideally a person employed in this Engineering discipline would have studied and achieved Higher Maths and Physics and a degree in Acoustics.

### SUPPORTING MAGGIE'S

Galloway Group are proud to put forward and support teams in the Maggie's Monster Bike & Hike cycling and walking 73 miles from Fort William to Inverness in aid of Maggie's Cancer Caring Centres.

### Construction Project Engineers

We supply and install ducting to new buildings. It is the Engineers job to oversee the whole process from the drawing board, through manufacture and to ultimate installation and testing. The job is a mixture of office and site based. You would be Galloway's contact with the customer on site.

A Building Services qualification would be helpful as would Standard or Higher Grades in Maths and Graphic Communication.

Galloway Group Apprentices won **Apprentice of the Year** in 2008 and 2009!

**INTERESTED?** If you are interested in exploring any possible opportunities with Galloway Group Ltd then let us know. Send us an email or letter with your name and details including the sort of opportunity you might be interested in.
